

ABSTRACT

Provided is a vehicle seat which is positionable between a use and not-in-use position convenient for increased storage space and access to rearward areas of the vehicle. The vehicle seat includes a seat part and a backrest. The seat part is pivotably coupled to the vehicle floor at one end so that the seat part may be moved frontward with respect to the vehicle. A transmission link is provided, coupled to the backrest and the seat part so that the backrest pivots into the not-in-use position as the seat part is moved into its not-in-use position.
